

## QDOS PMS

### Property Management System

Q\DOS PMS is a simple to use, fully integrated Hotel management software package that can be deployed as a standalone or network based application.

Designed with the hotelier in mind, this is ideally suited to the Guest house through to smaller hotel market usually up to 50 Bedrooms.

The core platform gives the hotelier the ability to manage all of the usual "Front Office" duties efficiently and accurately whilst leaving the reception team to deal with the Guest's real needs & requirements.

Fully interfaced to the Telephone System, the Q\DOS PMS solution brings a new dimension to Integration within the smaller properties using a single application to not only manage the front of house but to automate many of the manual processes that have historically been prone to human error and consequently an unfortunate loss of revenue.

#### Features & Functionality
